## **DETAILED ACTION**

### ***Election/Restrictions***

1. Claims 12-28 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4/2/04.

### ***Double Patenting***

2. Applicant is advised that should claims 3-6 be found allowable, claims 7-10 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

### ***Claim Rejections - 35 USC § 112***

3. Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claim 1, on line 10, the recitation "mechanically coupled to the portion of the rotor assembly" is functional, i.e., there is insufficient structure to perform the recited function. The rotor assembly was previously not positively recited.

Claims 2-11 inherit the defect in their parent claim.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Laskaris.

Laskaris discloses superconducting coil 36 with support member (42,52).

6. Claims 1-4, 7-8, and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Kameoka, et al.

Kameoka discloses superconducting coil 1, and support member 3 with thermally insulative material 7 and rounded member 8. (See Claims 6 or 20).

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 5-6 and 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kameoka as applied to claims 1-4 above, and further in view of Maeda, et al..

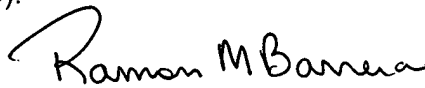

Kameoka discloses the claimed invention except that Kameoka disclosed circular-shaped windings instead of windings having a racetrack shape. Maeda, et al., shows that a racetrack-shaped winding was an equivalent structure known in the art. Therefore, because these two superconducting windings were art-recognized equivalents at the time the invention was made, one of ordinary skill in the art would have found it obvious to substitute a racetrack shaped winding in Kameoka.
